

In order to shoot the L-75 to its maximum range, it is important to open the valve all of the 90 degrees on one quick movement.

The picture illustrates the most efficient movement when opening the valve.

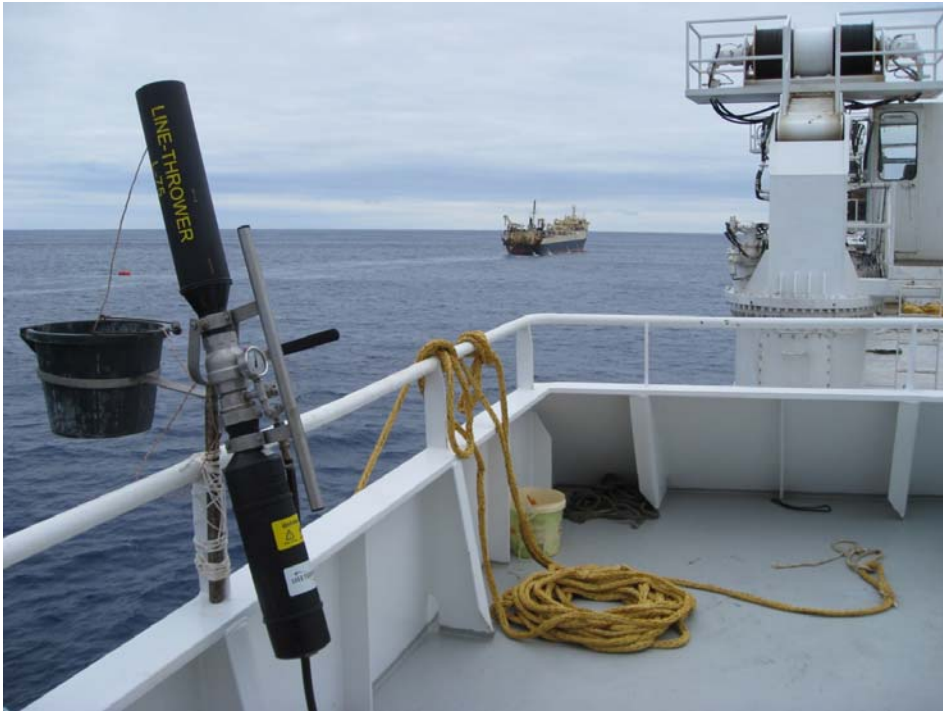

After shooting the line-thrower it is wise to use one hand to hold the line while it's running out. This makes you able to keep the ball from going too far by withholding the line.

For demonstrations we use a mock up of a rail to show how to mount the linethrower.

A line-thrower ready to throw a line to the next ship.

The L-75 is used for a wide range of tasks. It is here pictured onboard the former "Atlantic Dawn"

The Line-thrower is here used onboard a Faroese "Search and Rescue" vessel
